DETAILED ACTION

The specification is objected to because it fails to comply with the preferred layout as indicated below. The specification should be corrected appropriately in accordance with the preferred layout provided.

Specification

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if

Art Unit: 2858

the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 does not clearly define the claimed invention because the recited expressions such as "the property of the liquid is measured electrically for one parameter" and "another electrical method" are too broad in scope and do not define how and what kind of a property measurement is performed in relation to a parameter. Also, the claimed limitation of "measurement method resulting in the measurement of the liquid for its dielectric coefficient and relative water content" broadly recites a step for obtaining measurement result without defining how the result step is actually performed.

Furthermore, Claim 1 is not clear, because the claimed limitation "said measurement is repeated at two different temperatures in a so rapid succession that the water content of the liquid may be assumed to stay at least substantially constant", does not clearly define how rapid the measurement should be repeated, since the term

Art Unit: 2858

"assumed" does not represent a fact but merely an assumption of the state of the water content of the liquid.

Claim 9, does not clearly define the claimed apparatus in relation to claimed expression "one electrical sensor means (5, 6 or 1, 6)" and "second electrical sensor means (1, 6 or 6, 6)", since they do not represent two different sensor means because the numerical set designation (5, 6 or 1, 6) and (1, 6 or 6, 6) recited in the alternative form is considered the same for both sensor means.

Further, it is not clear how the "measuring a different parameter" measured by the second sensor is different from the one parameter measured by the first sensor, since both sensors measure the same parameter of a water content of a liquid.

Claims 1-8, 10-14 are also rejected because they depend from main rejected claims 1 and 9.

Appropriate correction is required to overcome the 112-second paragraph rejection, prior to any prior art is applied to the present application for further examination.
